Introduction:

A dating website is an online dating service presented through a mobile phone and/or computer device, to enhance the traditional nature of online dating. These platforms can simplify and speed the process of sifting through potential dating partners, chatting, flirting, and potentially meeting or becoming romantically involved over traditional online dating services. An online dating website uses different personality traits and desired attributes for every user for matching or use algorithms to match users. These factors enhance the possibility of users getting matched with a compatible candidate. Users are in control; they are provided with many options so there are enough matches that fit their particular type. Users can simply choose to not match the candidates that they know they are not interested in. Narrowing down options is easy. Once users think they are interested, they are able to chat and get to know the potential candidate. This type of communication saves the time, money, and risk users would not avoid if they were dating the traditional way. Online dating offers convenience; people want dating to work around their schedules. Online dating can also increase self-confidence; even if users get rejected, they know there are hundreds of other candidates that will want to match with them so they can simply move on to the next option.

About “Let’s Date”:

The purpose of this dating website is to facilitate a useful platform devoted to the culture of dating. “Let’s Date” aims to provide users a helpful platform for practising the culture of dating in a healthy and safe way. To get to know and meet with likeminded people with a view to forming any form of companionship is the objective that “Let’s Date” believes to serve.

Purpose and Benefits:

Purpose:

The main purpose of “Let’s Date” is to create a safe and helpful platform that allows users to get to know and meet like minded people with the mutual objective of forming companionship.

Benefits:

- It provides a higher possibility of users getting matched with a compatible candidate due to filtering options.
- Narrowing down options is easy due to its technological nature.
- This type of communication saves time, especially for people who want dating to work around their schedules.
- Online dating can also increase self-confidence; even if users get rejected, they know there are hundreds of other candidates that will want to match with them so they can simply move on to the next option.
- This type of communication saves money due to its technological nature; it only requires the internet as opposed to traditional dating which typically requires meeting up in public places that require money.
- This type of communication helps users to avoid risks by allowing them to get to know a person online first.

Features:

- Being able to match according to preference
- Option to unmatched whenever, according to user's whim
- Upload photos
- Filtering options such as height, age, interests, etc.
- Instant chatting
- Option to become premium user to access special features:
 - ☐ Blocking a user
 - ☐ Rate other users for enhancing desired features in a possible match
 - ☐ Get rated for a better chance at having matches

User Story:

User 1:

User 1 is a regular user. He/She gets to access following features:

- uploading one or more photos
- setting personal info such as height, age, educational background, etc.
- setting info for the user's desire's match such as preferred height of partner, age of partner, educational level of partner, etc.

User 2:

User 2 is a premium user. He/She gets to access following features along with **premium features**:

- uploading one or more photos
- setting personal info such as height, age, educational background, etc.
- setting info for the user's desire's match such as preferred height of partner, age of partner, educational level of partner, etc.
- Blocking unwanted users in case of unpleasant experience
- Rate other users for enhancing desired features in a possible match
- Get rated for a better chance at having matches

Limitations:

- Gaining credibility as a good platform
- Attracting an initial pool of users
- Monopoly of the business due to existing dating platforms such as Tinder, Bumble, etc. that are already million dollar businesses.

Solution Description:

Architecture:

Database will receive requests of users from browsers. There is MySQL for database system.

Frontend Plan:

1. Home page
2. Login Page
3. Blog Page
4. Contact Page
5. Sign up page
6. User Profile
7. Match Page

Tools Used:

1. Html
2. CSS

Backend Development:

Creating account:

- **Creating account**
- **Logging in**

Profile management:

- **User profile**

Matching:

- **Browsing through a pool of users to find a match**

Tools Used:

1. **MySQL**
2. **PHP**

Advantages:

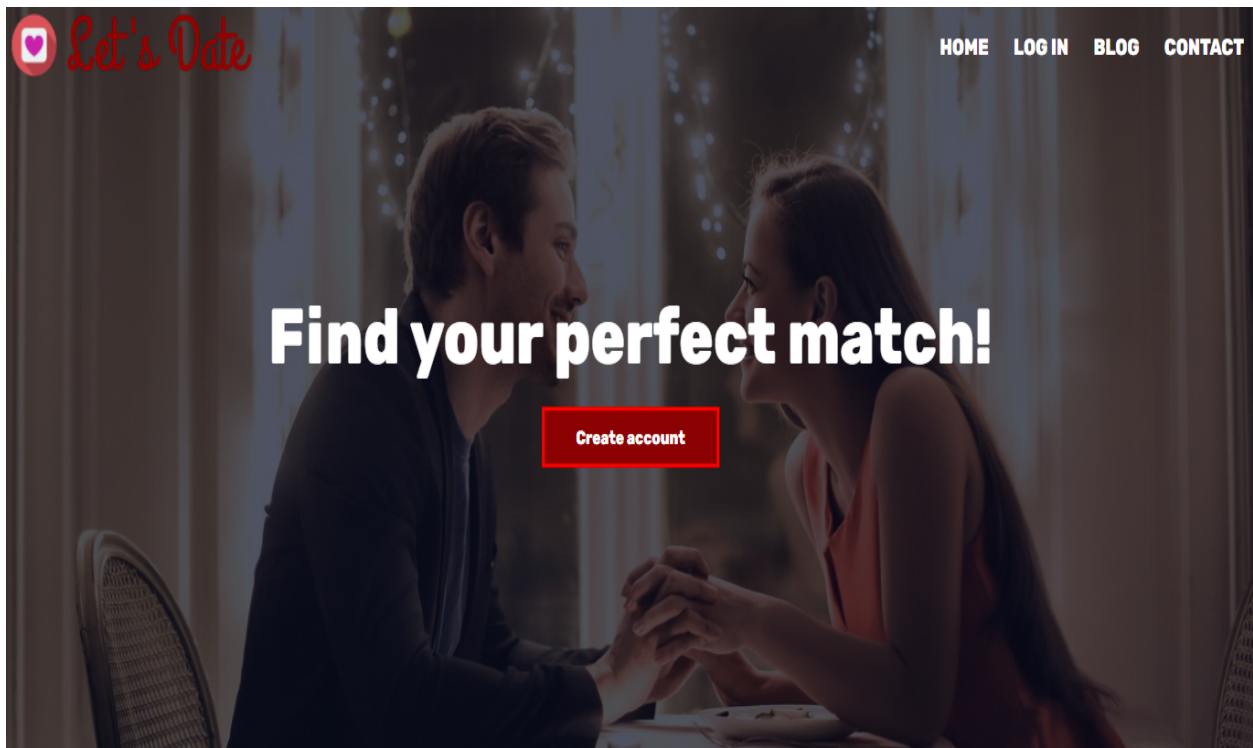

- It provides a higher possibility of users getting matched with a compatible candidate due to the filtering options.
- Narrowing down options is easy due to its technological nature.
- This type of communication saves time, especially for people who want dating to work around their schedules.
- Online dating can also increase self-confidence; even if users get rejected, they know there are hundreds of other candidates that will want to match with them so they can simply move on to the next option.
- This type of communication saves money due to its technological nature;

it only requires the internet as opposed to traditional dating which typically requires meeting up in public places that require money.

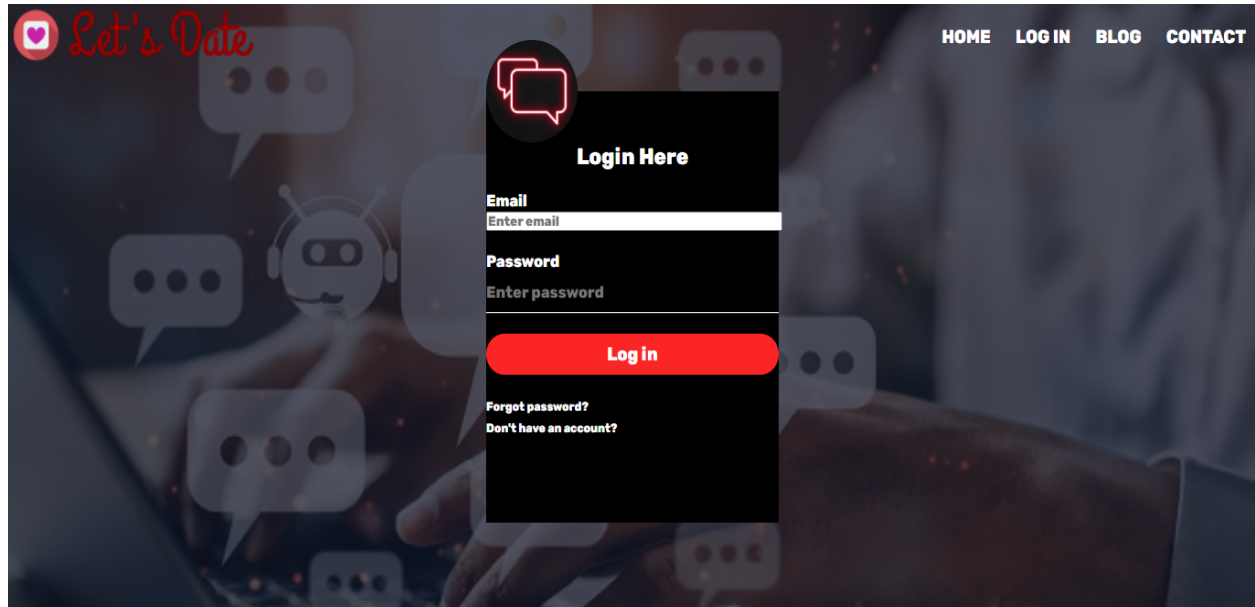

- This type of communication helps users to avoid risks by allowing them to get to know a person online first.
